## The "Chasing 75%" Mathematical Logic

To reach the 75% Safe Zone, you must attend consecutive future classes. As you attend more classes, the total number of sessions also increases. Below is the projected path to recovery:

| Future Classes Attended | Total Attended | New Total Sessions | New Percentage |
|-------------------------|----------------|--------------------|----------------|
| + 1 Class               | 2              | 5                  | 40.0%          |
| + 2 Classes             | 3              | 6                  | 50.0%          |
| + 3 Classes             | 4              | 7                  | 57.1%          |
| + 4 Classes             | 5              | 8                  | 62.5%          |
| + 5 Classes             | 6              | 9                  | 66.7%          |
| + 6 Classes             | 7              | 10                 | 70.0%          |
| + 7 Classes             | 8              | 11                 | 72.7%          |
| + 8 Classes (Target)    | 9              | 12                 | 75.0%          |

**Conclusion:** To compensate for the current 3 absences, you must attend **8 consecutive classes**. This brings your ratio to 9/12, which satisfies the mandatory 75% requirement.
